

Felix & Friends

Trump's Robotics Revolution Educational Workbook

Your Guide to Understanding the Investment Opportunity of the Decade

Welcome to Your Learning Journey!

This workbook is designed to help you better understand the concepts presented in the video about Trump's robotics executive order and the potential investment opportunities in the humanoid robotics revolution.

What You'll Learn:

- The scope and timeline of the robotics revolution
- Trump's national strategy and how it could accelerate adoption
- Investment categories and companies to research
- The most important skill: knowing when to sell
- How to create your own action plan

IMPORTANT DISCLAIMER

This is educational content only, not financial advice. All investing involves risk including potential loss of principal. There is no guarantee that any investment strategy will be successful. Past performance does not guarantee future results. Consult with a qualified financial advisor before making any investment decisions.

The Big Picture: The Robotics Revolution

Key Statistics to Remember:

- 1 billion humanoid robots projected by 2050
- \$5 trillion total market size
- \$305 billion semiconductor market just for robot chips
- \$2.60/hour operating cost by 2050 (vs. \$15-20/hour human labor)

Understanding the Opportunity

Morgan Stanley calls humanoid robotics "a pivotal chapter in human history." This technology shift is comparable to the internet in the 1990s or smartphones in the 2000s. However, unlike those past revolutions, you now have the chance to position yourself *before* mainstream adoption.

REFLECTION QUESTION 1:

What industries do you think will be most impacted by humanoid robots? List at least 3 industries and explain why.

REFLECTION QUESTION 2:

How might this robotics revolution affect your current investments or portfolio? Do you already have exposure to this trend?

Trump's National Strategy: The Four Pillars

According to Politico sources, Commerce Secretary Howard Lutnick is preparing an executive order on humanoid robotics. This isn't random—it's part of a comprehensive national industrial strategy.

The Four Interconnected Pillars:

1. Semiconductor Dominance

CHIPS Act, domestic manufacturing

2. Rare Earth Production

Reduce China dependence

3. AI Infrastructure

Data centers, power grid, AI chips

4. Robotics Leadership

The executive order coming soon

Why This Matters: The USA vs. China Competition

We're in a bipolar technological race with China. Whoever dominates robotics, AI, and semiconductors in the 2030s will dominate the global economy. This isn't about free markets—it's about national strategy and survival.

CRITICAL THINKING QUESTION:

Why do you think the U.S. government is prioritizing these four specific areas?
How are they connected?

Learning from History: The Rare Earth Trade Pattern

 **The Pattern:** After Trump's election, rare earth stocks (UUUU, NB, USAR) rallied 100%+ in weeks, then corrected 30-40% from their peaks.

Who Won vs. Who Lost:

- **Winners:** Had a selling rulebook. Took profits at 50%, 75%, 100%.
- **Losers:** Held on hoping for 200%-300%. Watched gains evaporate in the correction.

Key Lesson: The opportunity was real, but without selling rules, gains disappeared. The robotics trade is setting up the same way—potentially bigger opportunity, but you need rules to keep your gains.

PATTERN RECOGNITION:

What patterns do you see in previous "Trump Trades" or government-backed initiatives? What happened to stocks in those sectors?

TIMING QUESTION:

Why is timing important in thematic investment opportunities like this? What risks do you face if you enter too late or exit too late?

Investment Categories: Where to Focus Your Research

Understanding the supply chain and ecosystem is crucial. Here are the three main categories of companies involved in humanoid robotics:

CATEGORY 1: The AI Brain (Semiconductor Companies)

What they do: Make the chips that go inside the robot's head for AI processing

Key Companies to Research:

- **NVIDIA (NVDA)** - Jetson Orin and Thor chips for robotics. Dominates AI processing.
- **AMD** - Competing with NVIDIA in AI chips, lower valuation
- **ARM Holdings** - Every robot uses ARM-based processors (picks-and-shovels play)
- **TSMC (TSM)** - Manufactures chips for NVDA, AMD, ARM

Why it matters: Every robot needs AI processing. Semiconductor content per robot: \$2,100 today, \$3,400 by 2045.

CATEGORY 2: AI Vision (Camera & Sensor Companies)

What they do: Provide cameras and sensors so robots can "see" their environment

Key Companies to Research:

- **Sony (SONY)** - 53% market share in image sensors
- **ON Semiconductor (ON)** - Image sensors for automotive and industrial use
- **Ambarella (AMBA)** - AI vision processors (smaller company, higher risk/reward)

Why it matters: Each robot has 5-10 cameras. At \$30-50 per camera module, that's \$150-500 in vision hardware per robot.

CATEGORY 3: Sensing & Movement (Analog Chip Companies)

What they do: Provide chips for motors, sensors, power management, and control systems

Key Companies to Research:

- **Infineon (IFNNY)** - Motor control, power management, sensors
- **STMicroelectronics (STM)** - Automotive sensors and control
- **Texas Instruments (TXN)** - Analog chips, motor drivers
- **NXP Semiconductors (NXPI)** - Automotive-grade chips for robot control

Why it matters: Every joint needs a motor controller. Every motor needs power management. These are essential components.

The Robot Manufacturers (The Integrators)

- **Tesla (TSLA)** - Optimus robot, targeting 1 million units by end of 2026
- **Figure AI, Agility Robotics, Boston Dynamics** - Private companies (watch for IPOs)

**RESEARCH QUESTION 1:**

Which category interests you most and why? What makes it appealing or less risky?

**RESEARCH QUESTION 2:**

What additional research would you want to do before considering these sectors? (Examples: financial statements, competitive advantages, valuation metrics)

The Crucial Skill: Knowing When to SELL

⚡ CRITICAL INSIGHT ⚡

The crucial skill isn't picking what to buy—it's knowing when to sell.

Retail investors obsess over entry points. Professionals obsess over exit strategies.

Without a selling rulebook, you'll be like those rare earth investors who watched 100% gains turn into 30% losses. Here are the five rules from the video:

RULE #1: Scale Out, Don't Sell All at Once

When a stock hits your target, don't sell 100% of your position. Sell in thirds:

- First third at +50% gain
- Second third at +100% gain
- Final third at +150% gain or let it run with a trailing stop

Why: You never know how high it will go. Scaling out protects profits while allowing upside.

RULE #2: Never Let a Big Winner Turn Into a Loser

If a stock is up 50% and you haven't sold anything, set a trailing stop loss at +30%. If it's up 100%, set a trailing stop at +60%.

Why: Once you're up 50% or more, you're playing with house money. Protect it.

RULE #3: Watch for Distribution Signals

When a stock makes new highs on declining volume, that's distribution (smart money selling). Watch for:

- New highs on low volume
- Multiple failed breakouts
- Accelerating insider selling
- Analyst upgrades after 100%+ move (they're late)

Why: These are signals to take profits even if you haven't hit your price target.

RULE #4: Rebalance on Major News

When the executive order is announced, that's a "sell the news" event. The anticipation drives stocks up. The announcement is often the top for that news cycle.

Why: You can always buy back lower. Holding through "sell the news" events often means giving back 20-30%.

RULE #5: Have a Time-Based Exit

Thematic trades have a shelf life. Set a calendar reminder: 18 months after the executive order is announced, reevaluate all positions.

Why: Eventually it becomes a "show me the revenue" story. Don't fall in love with the story.

CREATE YOUR OWN SELLING RULES FRAMEWORK

Use this worksheet to create your personal selling rules before you invest:

Stock/Sector I'm considering: _____

I will sell my first third when the stock is up: _____ %

I will sell my second third when the stock is up: _____
%

I will sell my final third or set a trailing stop at: _____
%

My trailing stop loss will be set at: _____ % below the high

I will reevaluate this position on (date): _____

SELF-REFLECTION:

Have you ever held a winning investment too long and watched your gains disappear? What happened, and what would you do differently now?

Your Personal Action Plan

Knowledge without action is just entertainment. Use this action plan to turn what you've learned into concrete next steps.

5-STEP ACTION PLAN

STEP 1: Audit Your Current Portfolio

Review your holdings. How much exposure do you have to semiconductors, robotics, automation, AI, or tech in general?

- ☐ I've reviewed my current portfolio allocation
- ☐ I understand my current exposure to the robotics theme

STEP 2: Determine Your Allocation

Don't go all-in. Thematic trades should be 10-20% of your portfolio, split across 3-5 positions.

My allocation to robotics theme: _____ % of portfolio

Dollar amount: \$ _____

STEP 3: Set Your Selling Rules NOW

Before you buy anything, write down your selling rules (use the framework from Page 4).

- ☐ I've written down my specific selling rules
- ☐ I've saved them where I'll see them when making decisions

STEP 4: Monitor Key Catalysts

Set up alerts for: "Trump robotics executive order," "Tesla Optimus production," and your stock tickers.

- ☐ I've set up news alerts for key catalysts
- ☐ I have a system to stay informed

STEP 5: Continue Your Education

This isn't just about one trade—it's about building a system for thematic investing you can use for life.

- ☐ I'm committed to continuing my investment education

Risk Awareness & Timeline

Remember the risks:

- Technology delays (humanoid robots are difficult to build)
- Regulatory hurdles (safety certifications take time)
- China competition (they're moving fast with lower-cost robots)
- Valuation risks (some stocks may already be expensive)
- Macro environment (recessions impact discretionary tech spending)

Expected Timeline: 2025-2030 is the critical window, with major catalysts in 2026 (Tesla production) and 2027 (early commercial deployments).

Ready to Take Your Investment Education to the Next Level?

You're tired of watching your money sit idle while inflation eats away at your purchasing power, aren't you? While others struggle with investment decisions, educated investors are building their knowledge with research-backed strategies. Felix & Friends provides educational resources and research to help inform your investment decisions.

With the Intelligence Bundle, you'll get:

-  2 Monthly Stock Research Reports - Analyzed using our fundamental criteria
-  Starter Stocks List - 12 companies we believe have strong fundamentals
-  Community Forum Access - Connect with fellow investors sharing strategies
-  2 Daily BetterStocksGPT Searches - Access to our proprietary research tool
-  Bonus Reports - In-depth insights
-  Bonus Portfolio Review Call (\$149 value) - Comprehensive discussion of your current holdings

Remember, all investing involves risk including potential loss of principal, and there's no guarantee any investment strategy will be successful. Past performance doesn't guarantee future results and all investments carry risk of loss.

Ready to enhance your investment education and research capabilities? Get access to the Intelligence Bundle and start building your investment knowledge.
