

Goldman's Secret AI Winners Workbook

Your Guide to Understanding AI Productivity Investments

Welcome!

This workbook is designed to help you get the most out of the “Goldman’s Secret AI Winners” video. By working through these exercises, you’ll better understand how AI is transforming businesses and how you might apply this knowledge to your own investment research.

Remember: This workbook is for educational purposes only. It is not financial advice, and you should always do your own research and consult with a qualified financial advisor before making any investment decisions.

Part 1: Understanding the Big Picture

What You Learned

Goldman Sachs created a special basket of stocks called GSXUPROD (US AI Productivity basket). These are NOT the tech companies building AI - they’re companies USING AI to: - Cut costs - Boost profits - Work more efficiently

Key Statistics: - **37%** of large companies are using AI right now (2025) - Expected to grow to **50%** in 2026 and **74%** by 2028 - Companies are seeing productivity gains averaging **25%** (ranging from 10% to 55%)

Your Turn: Reflection Questions

Question 1: In your own words, what’s the difference between a company that BUILDS AI (like NVIDIA) and a company that USES AI (like the ones in Goldman’s basket)?

Write your answer here:

Question 2: Why do you think Goldman Sachs is interested in companies that are USING AI rather than just the companies building it?

Write your answer here:

Question 3: The video mentioned that this basket of stocks has actually UNDERPERFORMED the broader market in 2025. Why might that create an opportunity for investors in 2026?

Write your answer here:

Part 2: The Five Sectors

Goldman's basket covers five main sectors. Let's explore what you learned about each one.

Sector 1: Banks & Insurance

What AI Does Here: - Processes documents automatically - Handles customer service calls - Detects fraud - Makes credit decisions faster - Reduces the need to hire more employees as the business grows

Example You Learned: Bank of New York Mellon (BK) has 117 AI solutions already working and over 100 "digital employees" working alongside human staff.

Your Turn:

Question 4: Think about the last time you interacted with your bank (online, phone, or in person). Where do you think AI might have been involved in that experience?

Write your answer here:

Question 5: If a bank can handle 63% more loans with the same number of employees (like Rocket Companies), what does that mean for the bank's profits? Why?

Write your answer here:

Sector 2: Retail & Warehouses

What AI Does Here: - Recommends products you might like - Manages inventory (making sure stores have what you want) - Optimizes delivery routes - Provides customer service - Helps employees assist customers better

Example You Learned: Walmart built FOUR "super-agents" - AI assistants for customers, employees, suppliers, and developers.

Your Turn:

Question 6: When you shop online and see “Recommended for You” or “Customers also bought,” that’s AI at work. How does this help the company make more money?

Write your answer here:

Question 7: The video mentioned that Target deployed over 10,000 AI licenses to their team for forecasting. What is “forecasting” and why is it important for a retailer?

Write your answer here:

Sector 3: Transportation & Logistics

What AI Does Here: - Plans the best delivery routes - Predicts when trucks need maintenance - Automates paperwork and billing - Optimizes how cargo is loaded - Handles customer service calls

Example You Learned: J.B. Hunt has 50 AI agents that have automated over 100,000 hours of work annually.

Your Turn:

Question 8: If a delivery company like UPS can reduce “empty miles” (trucks driving without cargo) by 12%, what impact does that have on the company’s costs and profits?

Write your answer here:

Question 9: Werner Enterprises achieved a 40% cost reduction in back-office departments using AI. What do you think “back-office” means, and why would reducing those costs be valuable?

Write your answer here:

Sector 4: Healthcare Services

What AI Does Here: - Helps doctors with paperwork (so they can spend more time with patients) - Processes insurance claims faster - Predicts which patients need extra care - Provides virtual health assistants - Reduces claim denials

Example You Learned: Doximity's AI Scribe (which helps doctors take notes) TRIPLED its users in just one quarter.

Your Turn:

Question 10: The video mentioned that AI is reducing physician documentation time by over 50%. Why is this good for both doctors AND patients?

Write your answer here:

Question 11: Elevance Health has over 10 million members using AI-enabled virtual assistants. What kinds of questions do you think these virtual assistants can answer?

Write your answer here:

Sector 5: Restaurants

What AI Does Here: - Takes orders at drive-thrus - Recommends menu items (upselling) - Automates food preparation - Optimizes staff scheduling - Manages kiosk ordering

Example You Learned: Sweetgreen's "Infinite Kitchen" saves approximately 7% on labor costs while improving food quality and speed.

Your Turn:

Question 12: Have you ever used a kiosk to order at a restaurant? The video mentioned that Shake Shack's kiosk orders are "high-teens percentage" higher than traditional orders. Why do you think people spend more when ordering from a kiosk?

Write your answer here:

Question 13: Yum! Brands (which owns Taco Bell, KFC, and Pizza Hut) has AI in over 28,000 restaurants giving recommendations to store managers. What kinds of recommendations do you think would be helpful?

Write your answer here:

Part 3: Investment Thinking

Now let's think about what this all means for investing.

Understanding Risk and Opportunity

Question 14: The video mentioned several RISKS of investing in AI productivity stocks. List at least three risks you remember:

Risk 1: _____

Risk 2: _____

Risk 3: _____

Question 15: If EVERY company in an industry adopts AI, does the first company to adopt it still have an advantage? Why or why not?

Write your answer here:

Question 16: The video explained that 88% of business leaders expect their AI budgets to INCREASE in the next 12 months. What does this tell you about how confident companies are in AI?

Write your answer here:

Part 4: Applying What You Learned

Your Research Checklist

If you were going to research one of these companies further, here's what you should look for:

Checklist for Evaluating AI Productivity Stocks:

Does the company have SPECIFIC AI implementations (not just talking about AI)?

Are they reporting MEASURABLE results (like “30% cost reduction” or “63% more productivity”)?

Is the AI helping them in multiple areas of their business?

Are they seeing margin improvement (making more profit on each dollar of sales)?

Do they mention AI in their quarterly earnings calls?

Are they investing more in AI or scaling back?

Do competitors in their industry also have AI, or are they ahead?

Question 17: Pick ONE company from the video that interested you. Which one and why?

Company: _____

Why it interests you:

Question 18: Using the checklist above, what would you want to research about this company before considering it as an investment?

Write your answer here:

Part 5: The Bigger Picture

Understanding Market Trends

Question 19: Goldman Sachs said this basket has “higher potential for EPS growth from AI adoption than the S&P 500.”

First, what does “EPS” stand for? (Hint: It was mentioned in the video as a measure of company profits)

Answer: _____

Why would higher EPS growth potentially lead to higher stock prices?

Write your answer here:

Question 20: The video mentioned that corporate AI adoption is at 37% now and expected to reach 74% by 2028. What does this adoption curve tell you about how early or late we are in the AI productivity trend?

Write your answer here:

Part 6: Your Action Plan

What's Next?

Based on what you learned in the video, complete this action plan:

Three things I learned that I didn't know before:

1.

2.

3.

Two sectors that interest me most for further research:

1.

2.

One thing I'm still confused about or want to learn more about:

My next steps for learning more about AI productivity investing:

Watch the video again and take more detailed notes

Research specific companies mentioned that interest me

Read quarterly earnings reports from companies in the basket

Follow news about AI implementation in these industries

Learn more about how to evaluate company fundamentals

Other: _____

Important Reminders

Investment Disclaimers

Remember these critical points:

This is education, not advice: Nothing in this workbook or the video is financial advice. Always do your own research.

All investing involves risk: You can lose money investing in stocks, including potentially all of your investment.

Past performance doesn't predict future results: Just because a company had good results in the past doesn't mean it will in the future.

Diversification matters: Don't put all your money in one stock or even one sector.

Consult professionals: Consider working with a qualified financial advisor who understands your personal situation.

Do your own research: Use this workbook as a starting point, but dig deeper before making any investment decisions.

Continuing Your Education

Want to Learn More?

You're tired of watching your money sit idle while inflation eats away at your purchasing power, aren't you? While others struggle with investment decisions, educated investors are building their knowledge with research-backed strategies. Felix & Friends provides educational resources and research to help inform your investment decisions.

With the Intelligence Bundle, you'll get:

2 Monthly Stock Research Reports - Analyzed using our fundamental criteria

Starter Stocks List - 12 companies we believe have strong fundamentals

Community Forum Access - Connect with fellow investors sharing strategies

2 Daily BetterStocksGPT Searches - Access to our proprietary research tool

Bonus Reports - In-depth insights

Bonus Portfolio Review Call (\$149 value) - Comprehensive discussion of your current holdings

Remember, all investing involves risk including potential loss of principal, and there's no guarantee any investment strategy will be successful. Past performance doesn't guarantee future results and all investments carry risk of loss.
